### FAMILIAR BITE BAIT CARE GUIDELINES:

These baits are **PRE-SALT BRINED** and can be fished right out of package - **NO BRINING** necessary, yet they hold their scales which produce more "FLASH"

To insure freshness keep baits out of water (waterlogged), blood (discolored) or open air (drying out) in a separate small Tupperware type container (being crushed) and always refrigerated or on plenty of ice.

### INSTRUCTIONS:

To rig FAMILIAR BITE bait, slide plastic head approx. 6" up leader away from hooks.

Insert bait snugly into plastic cavity.

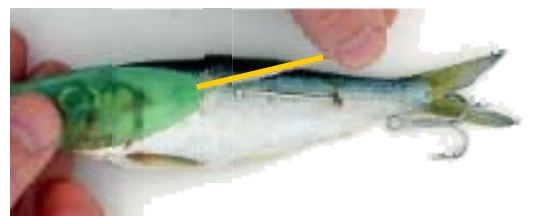

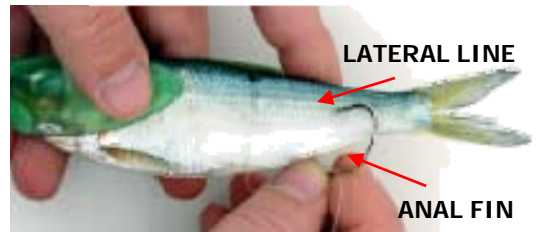

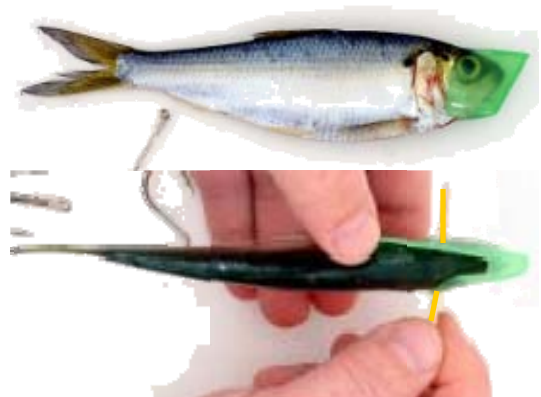

Push a dry toothpick through one hole to the other side. (Cut or break toothpick ends close to bait head).

Insert first hook near lateral line somewhere above anal fin and allow rear tandem hook to hang freely. (Carefully pull leader through bait head to remove slack in leader line).

Insert a dry toothpick at rear of bait head to keep tension on leader.

Continue pulling leader to put a slight arc in bait for proper roll. (Cut or break toothpick end close to bait head).

*THE ROLL MIMICS A DYING BAIT FISH. SPEED OF ROTATION IS CONTROLLED BY THE AMOUNT OF ARC IN THE BAIT AT THE PROPER CADENCE OF ONE TO TWO ROTATIONS PER SECOND.*

STANDARD **MAIN LINE LEAD** LENGTHS for **FAMILIAR BITE**

	<b>No Flasher</b>	<b>Sm. Flasher 8"</b>	<b>Lg.Flasher 10"-13"</b>
<b>DIPSY (EXCLUDING 8"-10" SNUBBER)</b>	3ft to 4ft	3ft to 4ft	3ft to 4ft
